

# Ch 3: Cell Membrane

**KEY CONCEPT** The cell membrane is a barrier that separates a cell from the external environment.

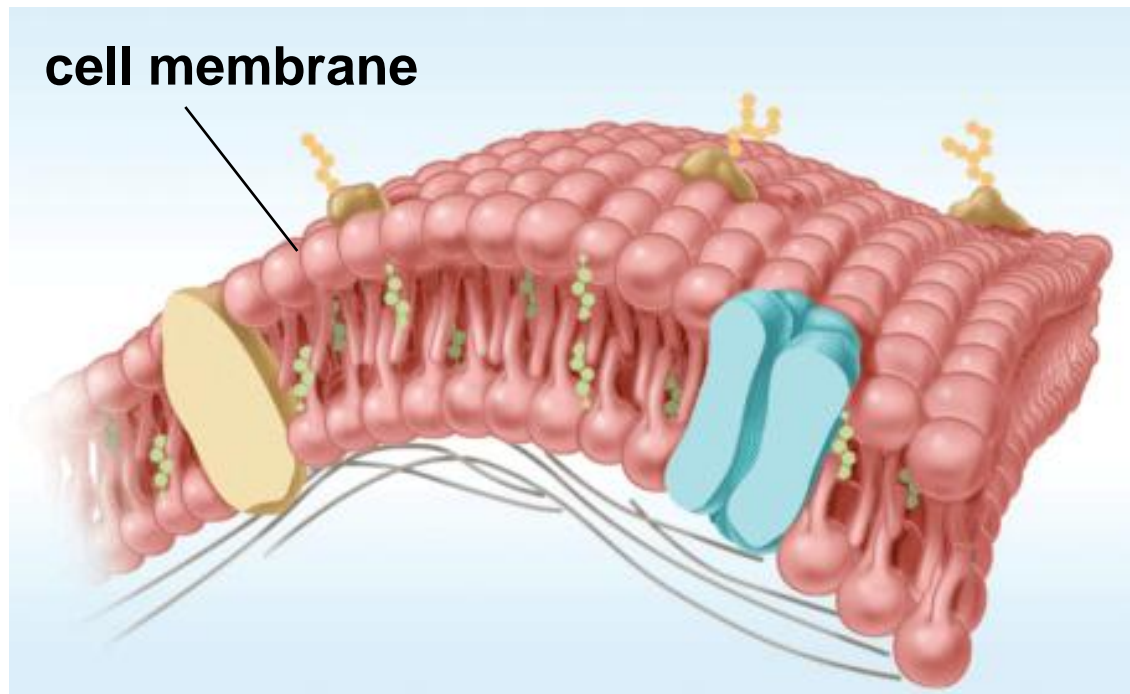

# Ch 3: Cell Membrane

- ▶ **Cell membranes are composed of two phospholipid layers.**

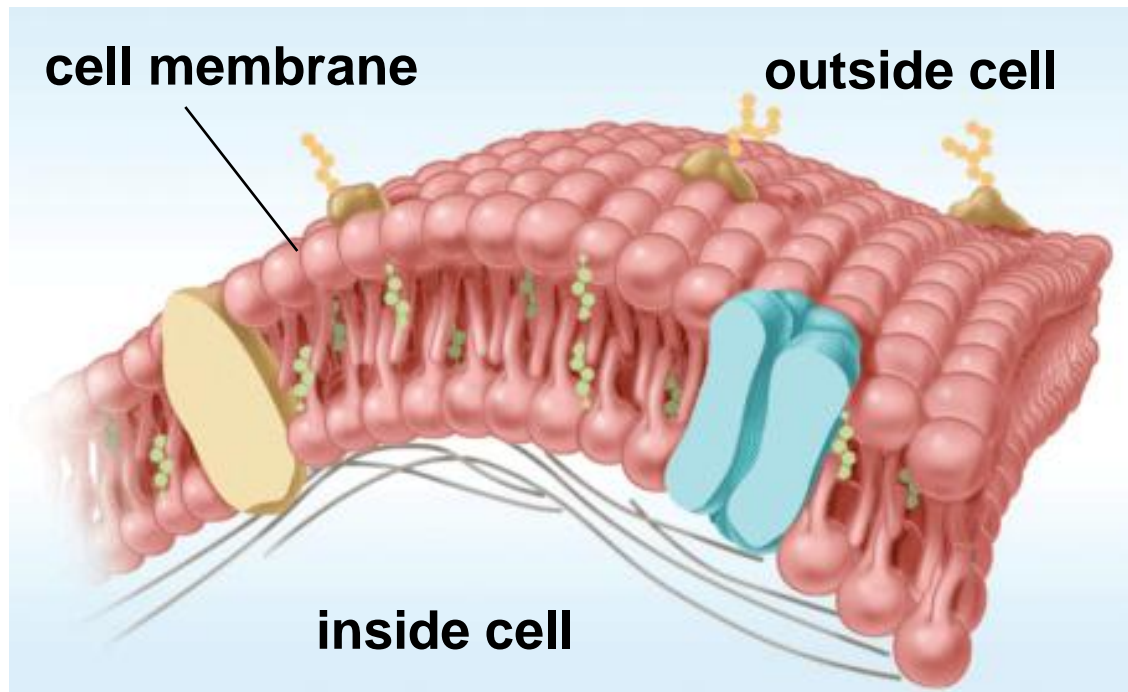

# Ch 3: Cell Membrane

- ▶ **Cell membranes are composed of two phospholipid layers.**
  - The cell membrane has two major functions.

# Ch 3: Cell Membrane

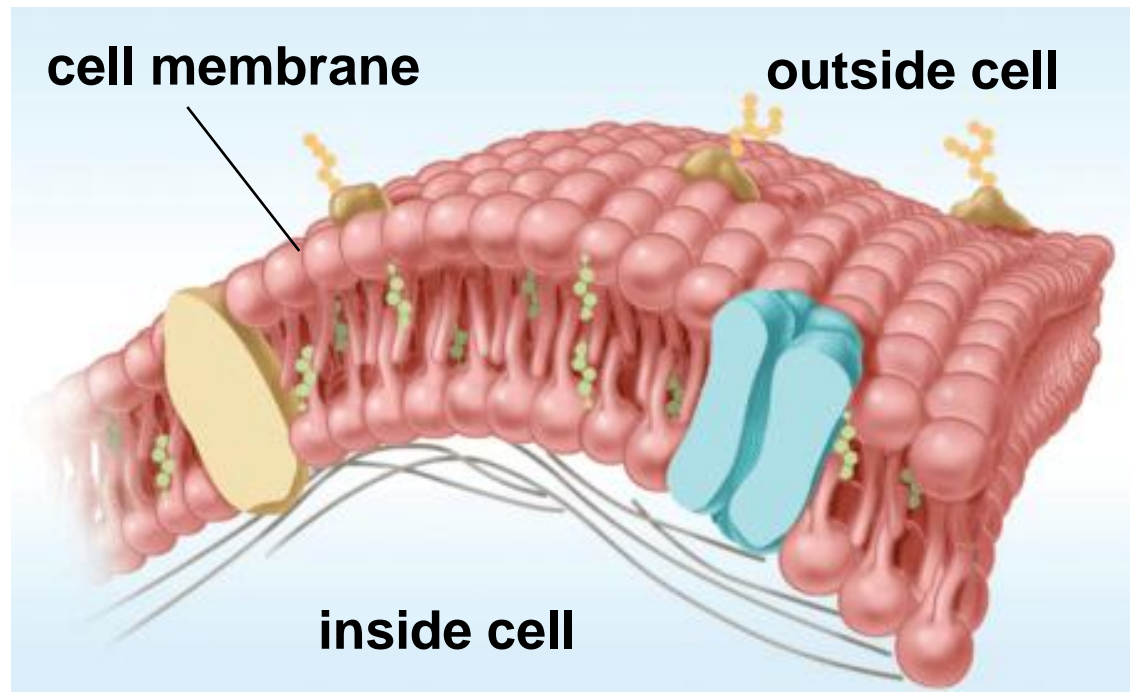

- ▶ **Cell membranes are composed of two phospholipid layers.**
  - The cell membrane has two major functions.
    - forms a boundary between inside and outside of the cell

# Ch 3: Cell Membrane

- ▶ **Cell membranes are composed of two phospholipid layers.**
  - The cell membrane has two major functions.
    - forms a boundary between inside and outside of the cell
    - controls passage of materials

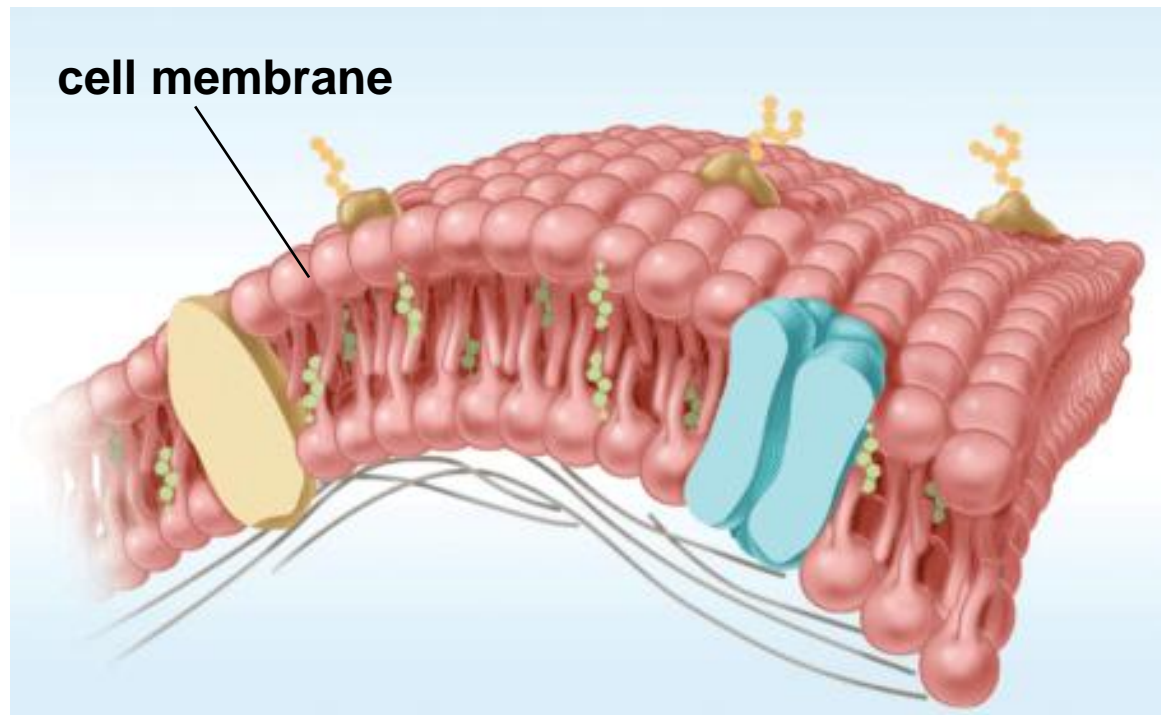

# Ch 3: Cell Membrane

- ▶ **Cell membranes are composed of two phospholipid layers.**

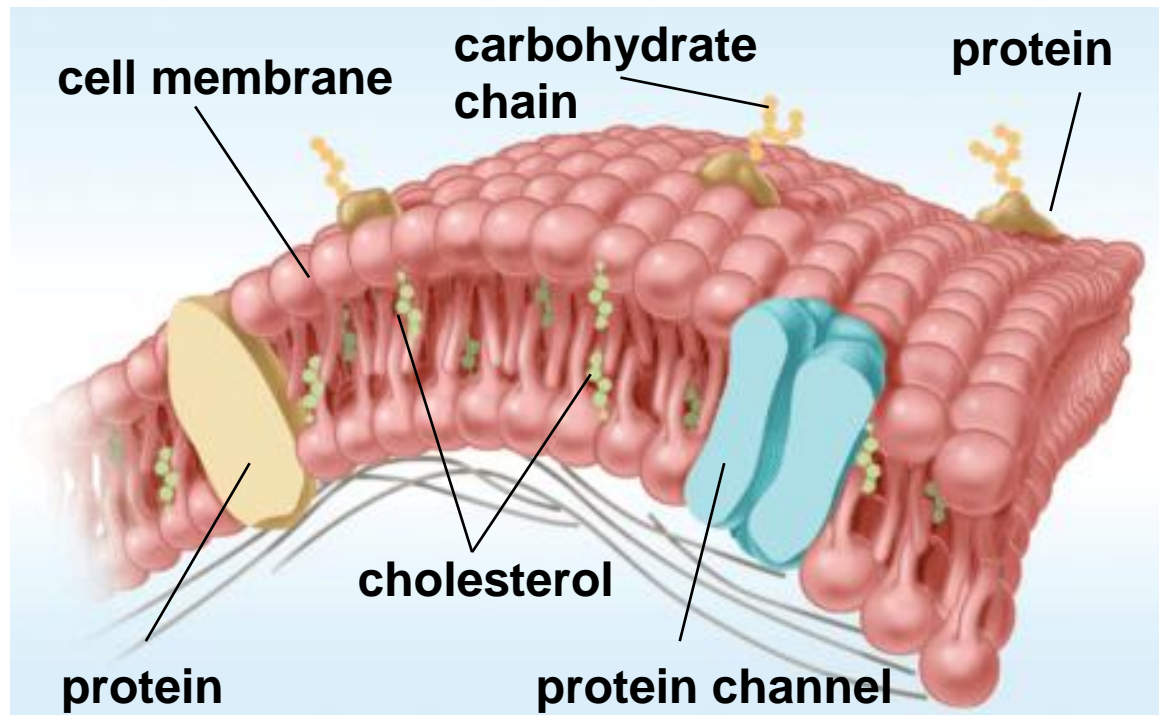

# Ch 3: Cell Membrane

- ▶ **Cell membranes are composed of two phospholipid layers.**
  - The cell membrane is made of a phospholipid bilayer.

# Ch 3: Cell Membrane

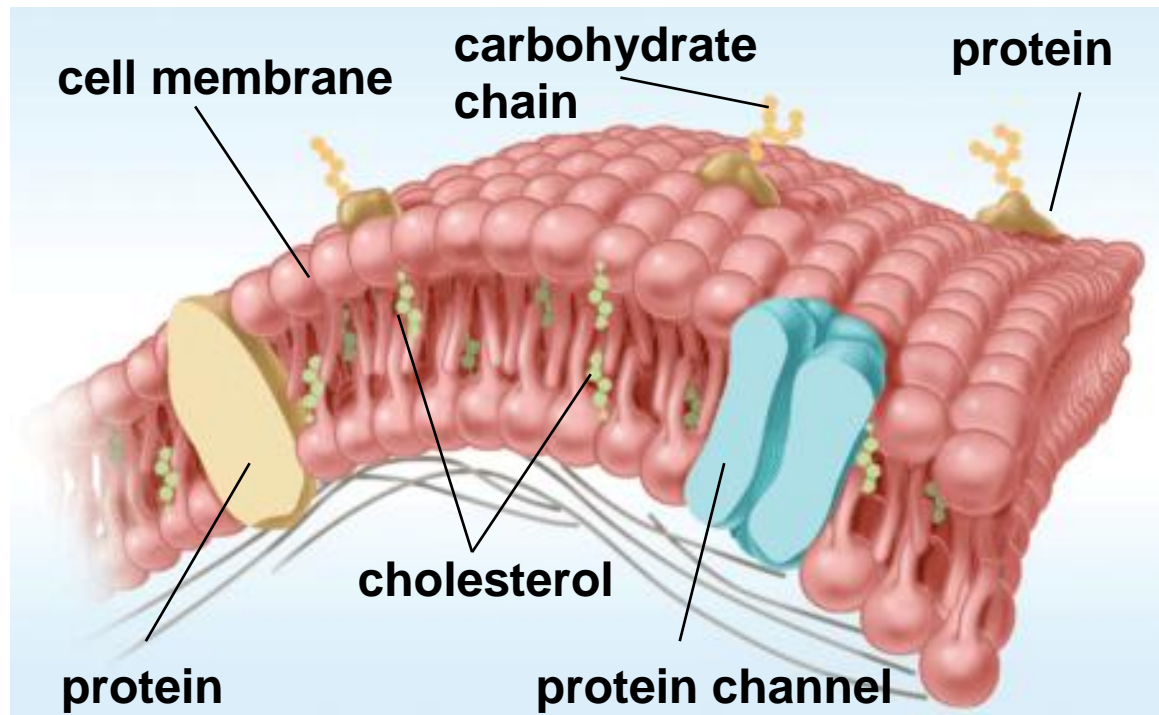

- ▶ **Cell membranes are composed of two phospholipid layers.**
  - The cell membrane is made of a phospholipid bilayer.
  - There are other molecules embedded in the membrane.

# Ch 3: Cell Membrane

- ▶ **Cell membranes are composed of two phospholipid layers.**
  - The cell membrane is made of a phospholipid bilayer.
  - There are other molecules embedded in the membrane.
  - The fluid mosaic model describes the membrane.

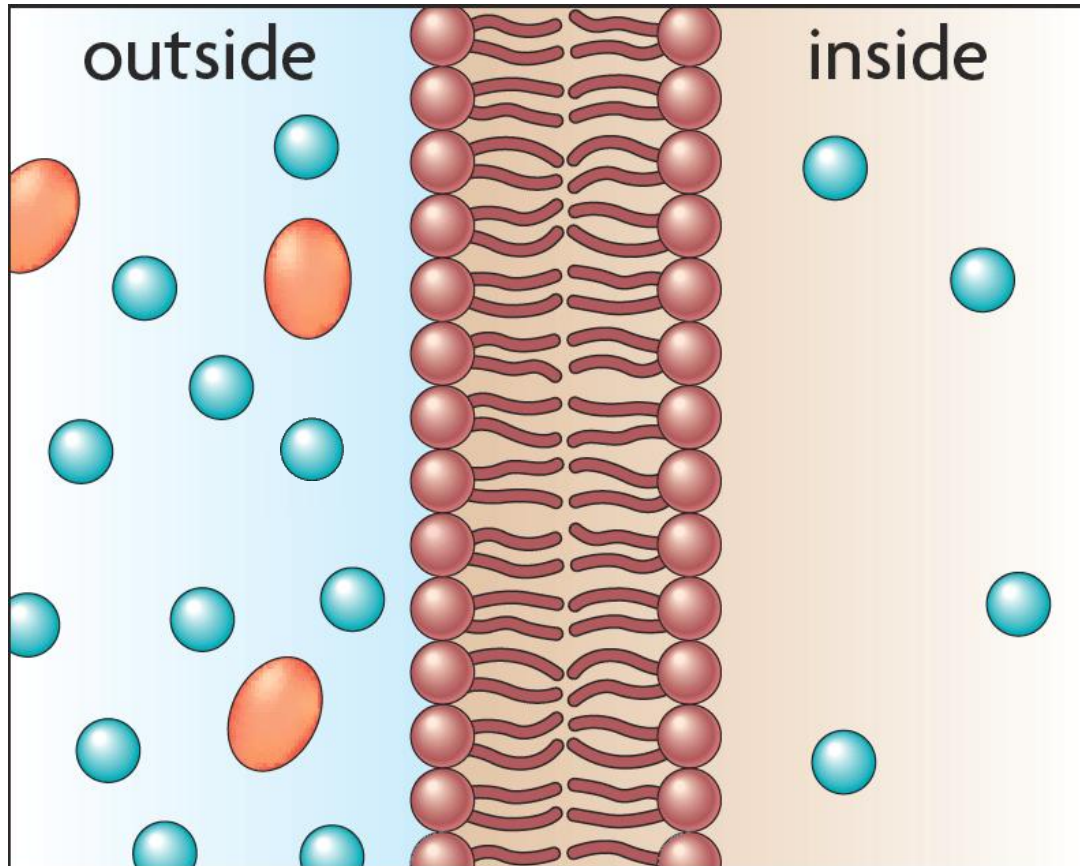

# Ch 3: Cell Membrane

- ▶ **Cell membranes are composed of two phospholipid layers.**

# Ch 3: Cell Membrane

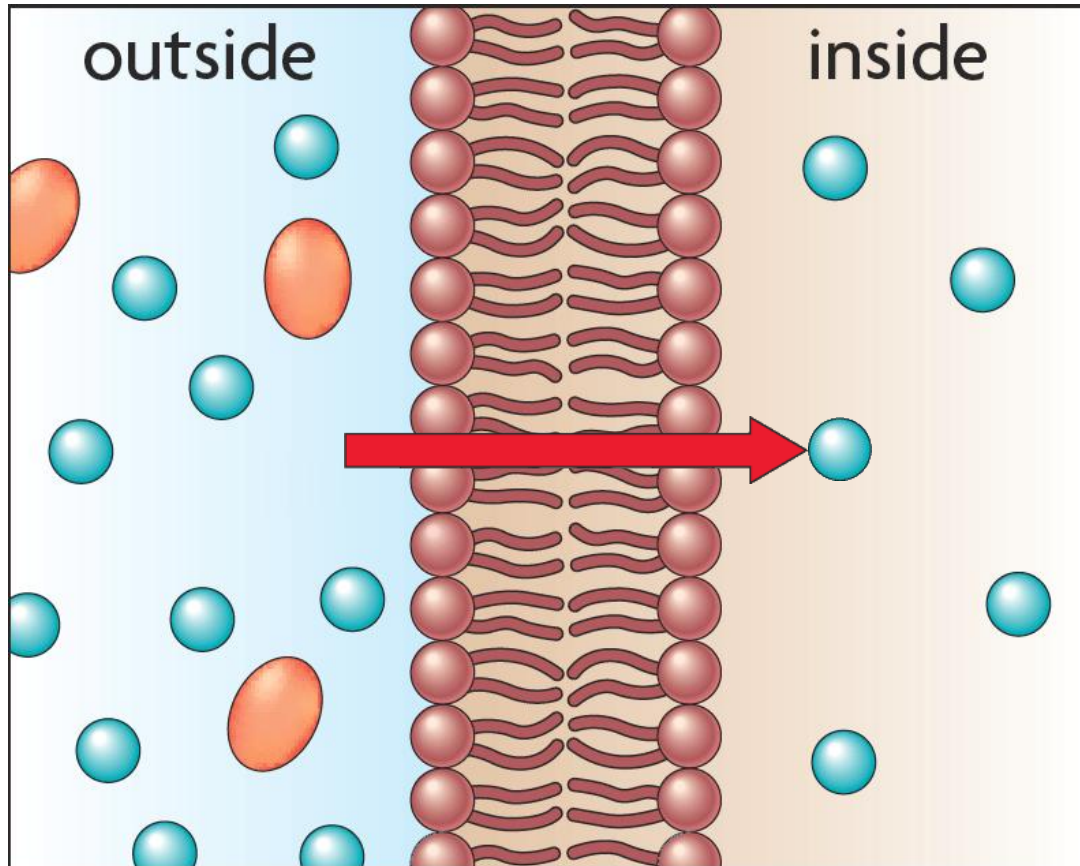

- ▶ **Cell membranes are composed of two phospholipid layers.**
  - The cell membrane is selectively permeable.

Some molecules can cross the membrane while others cannot.

# Ch 3: Cell Membrane

- ▶ Cell membranes are composed of two phospholipid layers.
- The cell membrane is selectively permeable.

Some molecules can cross the membrane while others cannot.

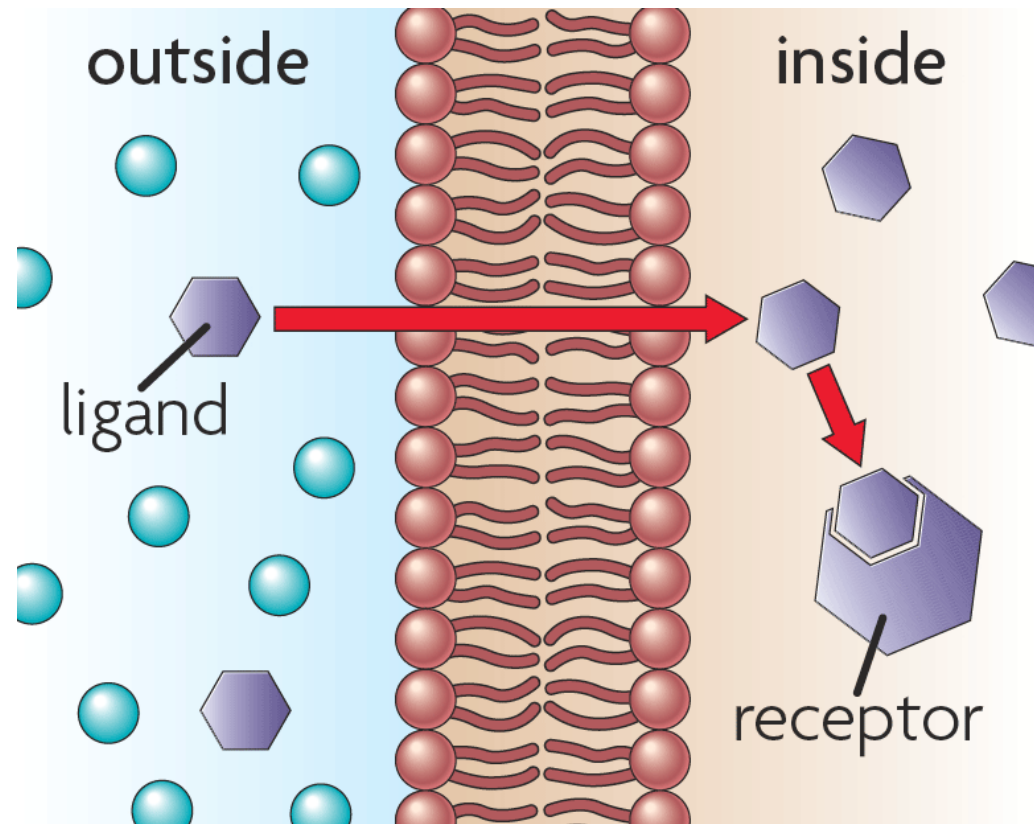

# Ch 3: Cell Membrane

- ▶ **Chemical signals are transmitted across the cell membrane.**
  - Receptors bind with ligands and change shape.
  - There are two types of receptors.

# Ch 3: Cell Membrane

- ▶ **Chemical signals are transmitted across the cell membrane.**
  - Receptors bind with ligands and change shape.
  - There are two types of receptors.
    - intracellular receptor

# Ch 3: Cell Membrane

- ▶ **Chemical signals are transmitted across the cell membrane.**
  - Receptors bind with ligands and change shape.
  - There are two types of receptors.
    - intracellular receptor
    - membrane receptor
